

# HOP REPORT

## MONTH - APRIL

YEAR	2016	2015	30-years average
avg. temperature	8,4	8,7	8,5
precipitation	14,8	34,0	32
	Day	Value	
max. precipitation	13.04.2016	5,8	mm
min. temperature	02.04.2016	-3,7	°C
max. temperature	05.04.2016	24,2	°C

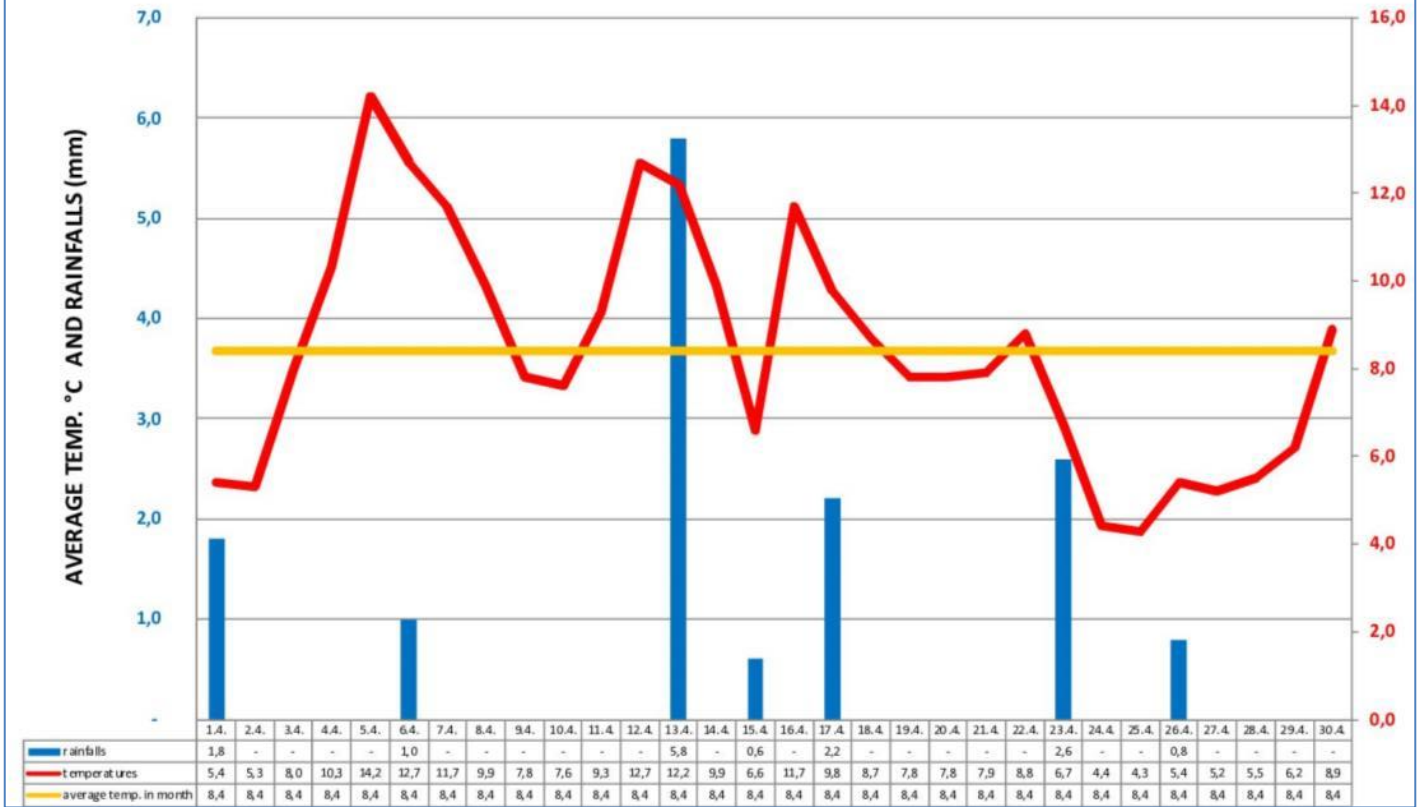

Comments	<p>April was below average as to temperatures and precipitation compared to 30-years average. Growth stage has not started yet in the most of hoggardens because a second half of the month was very cold and dry. The height of hopplants was between 0 - 40 cm. The course of weather in April was suitable for spring works in hoggardens. Root cutting was finished in time, wire-stringing was nearly finished and ca 40-50% of wires were stabled into soil. Chemical protection against alfalfa snout beetle was effected in some hoggardens. We estimate an increase of acreage of Saaz variety about 120 – 150 ha compared to last year. The exact acreage will be informed additionally as it should be announced by UKZUZ within next few days.</p>
