Comments	<p>August was above average as to temperatures and below average as to precipitation, both compared to 30-years average.</p> <p>The harvest of hops started between 17th and 20th August in most of hop-farms and due to preliminary results we can expect very good average yield of 1,4 – 1,5 mt / 1 ha (Saaz/all regions). Average alpha acid content is estimated on the level of 3,3 % (EBC 7.4). There are big differences between individual hopgardens - 2,5 % in some of old gardens, 4,5 % and more in some of young gardens.</p> <p>Weather conditions for spreading downy mildew was favourable this year. Some (mainly sturdy) hopgardnes are damaged. The rest of hops are in very good health condition.</p> <p>The end of harvest is estimated on about 20th September only.</p>
