

HOP REPORT

MONTH – August 2023

YEAR	2023	2022	30-years average
avg. temperature	19,7	19,8	18,4
precipitation	66,7	40,5	71,9
	Day	Value	
max. precipitation	28.08.2023	13,3	mm
min. temperature	10.8.2023	7,5	°C
max. temperature	22.8.2023	33,3	°C

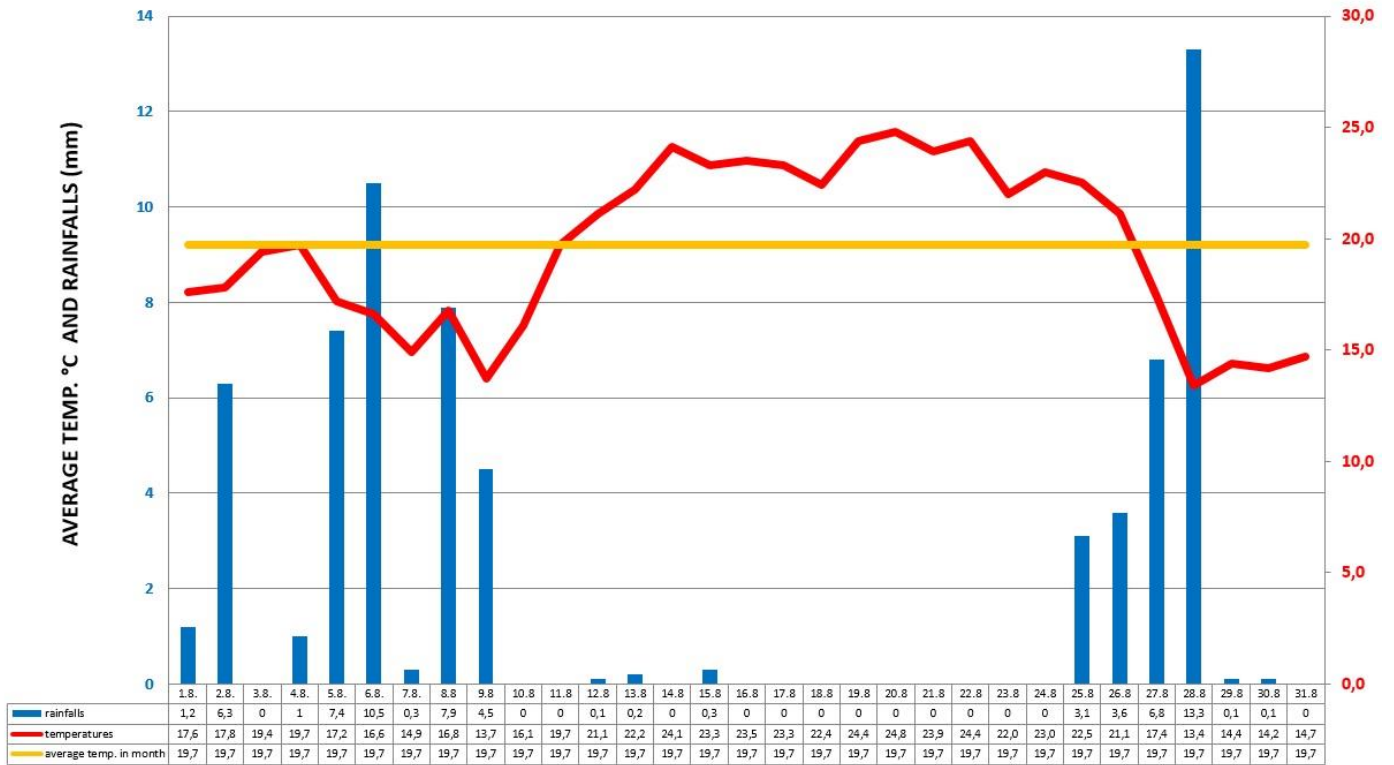

Comments	<p>The month of August was above average in temperature and average in precipitation compared to the 30-year average. The first growers started to harvest on 17th August, i.e. on the usual date. The hopplants were kept in good health condition. Precipitation at the beginning of the month had a positive influence on the yield and an above-average harvest can be expected - we currently estimate a yield of 1.2-1.3 t/ha for the Saaz area. Alpha-wise, it will be a below-average harvest, current results are averaging around 2.3% in origin. (EBC 7.4).</p> <p>At the end of the month, around 40 ha of hopgardens in the Trstice area were damaged by the wind storm (ZD Kokory 20 ha, Agra Velký Týnec 12 ha, Agrospol Velká Bystřice 5 ha, ZD Doloplazy 1 ha) - it will not have a significant impact on the supply of hops to ŽHC.</p>
