Comments July was below average as to temperatures and much above average as to precipitation (+ 135,2 mm), both compared to 30-years average. The hopplants are in phase of blossom and hop-cones formation. The growth of hops is ahead by cca 1 week compared to last crop-year. The protection against Downy Mildew, Aphides and Red Spider Mite was duly carried out. The hopplants are in good health conditon. Taking into consideration the current situation (stand condition) we expect that the yield of Saaz hops in Zatec area (Saaz/Saaz) will be 1,2 mt / 1 ha or even higher. It is expected that some growers will start harvesting on about 15th August already.
