

HOP REPORT

MONTH – JULY 2025

YEAR	2025	2024	30-years average
avg. temperature	19,0	20,7	19,2
precipitation	51,6	38,4	76,3
	Day	Value	
max. precipitation	21.7.2025	27,4	mm
min. temperature	5.7.2025	8,3	°C
max. temperature	2.7.2025	35,6	°C

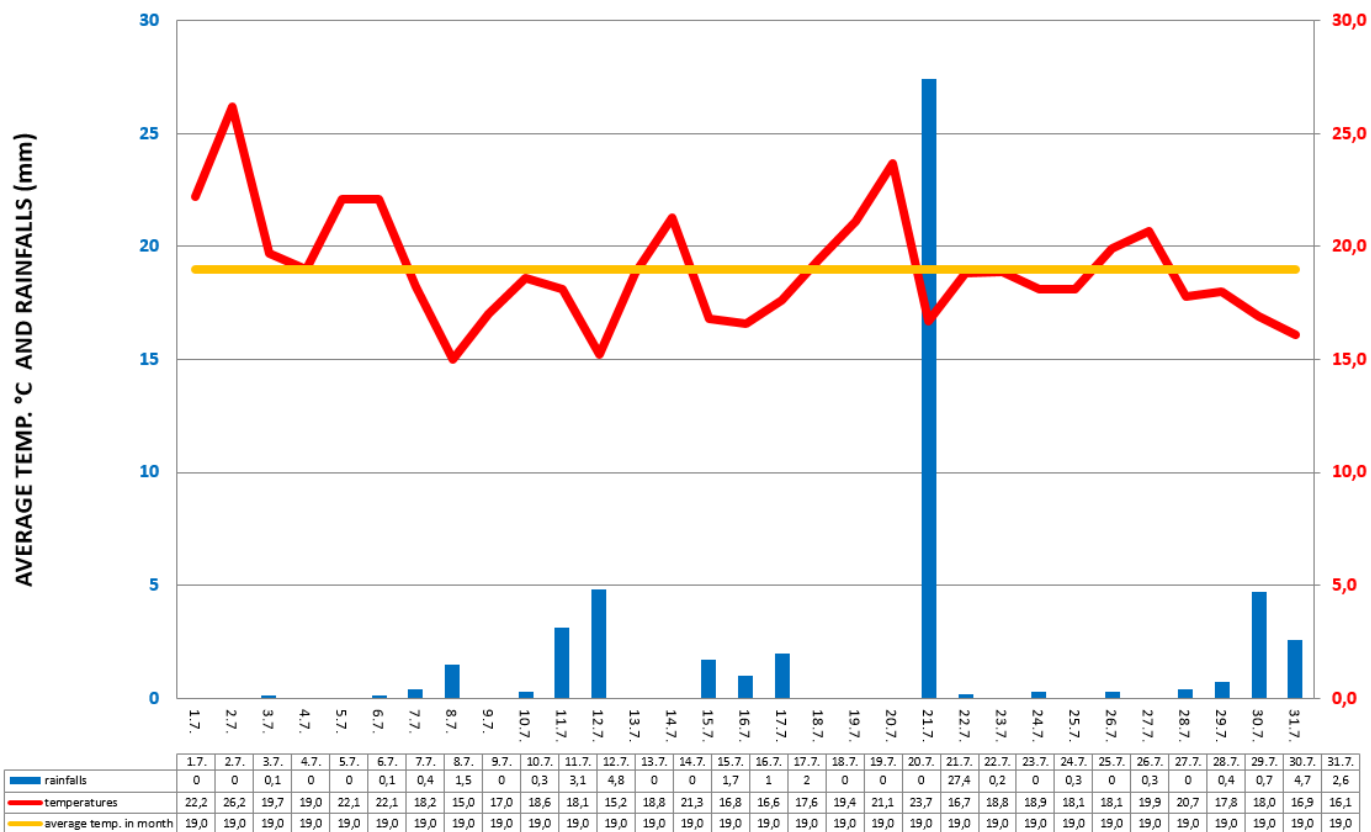

Comments	The month of July was below average in both temperature and precipitation compared to the thirty-year average. Some of the precipitation occurred as locally isolated thunderstorms. The hop plants are currently in the flowering and cone development stages. Chemical protection against downy mildew, aphids and red spider mite were carried out continuously. The overall health condition of the hop plants is good. Depending on further weather developments, an average to above-average harvest can be expected. Most growers plan to begin harvesting between 18th and 23rd August.
